Honeywell

Pro-Watch® Vindicator® Edition

Access Management System for Mission Critical Applications

Honeywell's Vindicator® V5 security platform has been integrated with the Pro-Watch® Access Management System. Pro-Watch Vindicator Edition (VE) allows users to secure facilities such as government and military installations access control and video surveillance. The system features an intuitive graphic user interface that integrates with Honeywell's next-generation video management platform, and compatibility with the company's LobbyWorks™ Visitor Management System.

This new solution allows current Vindicator users to continue using V5-based systems such as the V5 Access Control System (ACS) and the V5 Intrusion Detection System (IDS).

The interface improves ease of use while providing powerful integration with Honeywell's next-generation video management platform, enabling users to seamlessly combine video and access functions. The system can manually control portal access and present information for real-time video verification of cardholders. It also features reporting functions that help organizations comply with industry and federal regulations.

FEATURES

- Pro-Watch access event engine
 - Pro-Watch reporting
 - View hardware tree
 - Tracking and auditing of every change to Pro-Watch
 - Control portals via Pro-Watch to enable manual door lock/unlock by an authorized operator
 - Supports multiple V5 IDS or ACS servers
 - Event history limited only by database capacity
 - Video verification of portal of events
 - Database partitioning per operator authority
 - SQL, SQL Express, ODBC, OLE database protocols
 - TCP/IP, LAN/WAN networking protocols
- Supports multiple card technologies through V5 ACS:**
- Smart card
 - Proximity
 - Biometrics (hand geometry)
 - Wiegand
 - Keypad
 - Magnetic strip

BENEFITS

Easy to use – The system hardware view will show status of attached V5 servers and their configured state. The status of function, communication and firmware will all be visible from the Pro-Watch administration console.

Customized information – Pro-Watch VE provides powerful and flexible reporting capability. Several pre-configured access control reports are available for extracting information, and extensive auditing capabilities protect the integrity of a system and its access control database information. Users can customize how events are handled, checking off instructions as they go – even routing instructions to another user for follow-up.

Storage capability – Events are stored in the Pro-Watch SQL database.

Single badge record – Badge records and reports can be pulled for associating events and actions.

Comply with increasing regulatory requirements – Provides auditing and tracking capabilities via dual signatures for change and maintaining extensive access control records.

Pro-Watch® Vindicator® Edition

Access Management System for Mission Critical Applications

ACCESS SYSTEM INTEGRATION

Pro-Watch Integration with MAXPRO™ VMS

The next generation user interface of MAXPRO VMS offers a single command and control interface and enables users to operate video devices in an efficient manner. MAXPRO HVMS intelligently determines the capabilities of each subsystem across various sites, allowing video management of any analog or digital video device through a unified configuration and viewer. The subsystems can be analog switchers such as MAXPRO-Net and VideoBloX, and can be connected to analog monitors and cameras as well as digital recorders such as IP Engine, Enterprise, Rapid Eye™, and Fusion connected to digital and IP cameras.

Pro-Watch Integration with LobbyWorks™

Database integration between LobbyWorks™ and Pro-Watch. Badges issued and assigned through LobbyWorks™ can easily be tracked using the Pro-Watch database.

Pro-Watch Integration with DVM R200 Integration

Pro-Watch integration with DVM Release 200 provides seamless alarm and event activated recording. With the power of digital recording, all images are stored in a quickly searchable database, which means you will never have to spend valuable time searching through old videotapes.

DVM intelligently captures video, utilizing video motion detection for activation of recordings and initiating alarms. Incidents that take place immediately prior to an alarm are also recorded, ensuring you never miss vital events. For enhanced security, all video is digitally signed, with a complete audit trail of all operator actions and system events. Additionally, Pro-Watch supports DVM R200 motion event video analytics to utilize advance algorithms to trigger events and alarms.

SYSTEM CONFIGURATION

ORDERING

548-33958-02	PWVE Server Station, with SQL, RAID 1 Storage, 2GB Ram
548-33958-03	PWVE Server Station, with SQL, RAID 5 Storage, 4GB Ram
548-33962-01	Combined VCC/PWVE Work Station, SQL, RAID 1 Storage, 2GB Ram
548-33962-02	Combined VCC/PWVE Work Station, SQL, RAID 5 Storage, 4GB Ram
548-33961-01	PWVE Client Work Station
548-33963-01	Combined Remote VCC and PWVE Client Work Station
